                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to human endogenous orphan G protein-coupled receptor (GPCR) proteins and polynucleotides encoding such proteins. The cDNA sequence of the human G protein-coupled receptor (GPCR) is useful in making a probe for dot-blot analysis against tissue-mRNA and/or for RT-PCR identification of the expression of the receptor in tissue. Samples. GPCR sequences of the invention may be used in disease/disorder identification and/or selection, in screening of candidate compounds for use as pharmaceutical agents and in research settings. The present sequence is human endogenous orphan GPCR protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                       Human endogenous orphan GPCR hARE-2.

```
The invention describes a method of identifying one or more candidate compounds as a modulator of a G protein-coupled receptor that comprises a CC compounds as a modulator of a G protein-coupled receptor that comprises a CC fully defined sequence of 337 amino acids (SEQ ID NO: 82), comprising CC contacting the one or more compounds with a host cell or with a membrane CC of a host cell that expresses the receptor, and measuring the ability of the compound or compounds to inhibit or stimulate functionality of the creceptor. Also described are: a method for identifying one or more candidate compounds as a modulator of inflammation; a method for coupled receptor; a compound identified by any of the methods cited compoused receptor; a compound identified by any of the methods cited cabve; a pharmaceutical composition; a method of modulating the activity of a G protein-coupled receptor having the amino acid sequence of SEQ ID CC NO.82; a method of modulating inflammation in a mammal in need of the inhibiting; a method of preventing or treating an inflammatory classified by any of the sequence of the inhibiting; a method of preventing or treating an inflammatory classified of the preventing or treating; and a method confident in a mammal in need of the inhibiting an inflammatory disorder. The methods and compositions of the greent invention are useful for the treatment of diseases or conditions of inflammation. This is the amino acid sequence of human G protein coupled confident of the prevention are useful for the treatment of diseases or conditions associated with aberrant expression or activity of the GPCR e.g.

The invention relates to identifying one or more candidate compounds as modulators of a G protein-coupled receptor comprising an endogenous human ARE-2 polypeptide (appearing as AD075080) comprises measuring the ability of the compound or compounds to inhibit or stimulate functionality of the receptor. The endogenous human ARE-2 polypeptide is encoded by a nucleotide sequence, the nucleotide properties is encoded by a nucleotide sequence, the nucleotide of human DNA library using specific probe EST (expressed sequence tag) clone 68530, where the amino
                                                                                                                                                                                                                                                            Identifying one or more candidate compounds as modulators of a G protein-coupled receptor, useful as pharmaceutical agents, comprises measuring the ability of the compound or compounds to inhibit or stimulate functionality of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           07-OCT-2004

The method is useful for identifying one or more candidate compounds as modulators of a G protein-coupled receptor. The compounds are useful as pharmaceutical agents, or in research. Also disclosed are the cDNA open reading frames of other human GPCRs identified using the EST probe. The present sequence represents a human GPCR whose encoding sequence was identified using the EST probe.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence is the human Monalisa protein of the invention. The Monalisa protein is a member of the G-protein coupled receptor family. The Monalisa polypeptide and polynuclectide are useful for treating infections e.g. bacterial, fungal or viral infections particularly those caused by HIV-1 or HIV-2. The Monalisa sequences are also useful for treating pain, cancers, diabetes, obesity, anorexia, bulimia, asthma, carking pain, cancers, diabetes, obesity, anorexia, bulimia, asthma, carking pain, cancers, diabetes, obesity, anorexia, bulimia, asthma, carking, retention, osteoporosis, angina pectoris, myocardial infarction, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, schizophrenia, manic depression, delirium, dementia, and severe mental retardation), dyskinesias, Huntington's disorder, and Gilles dela creative's syndrome. The Monalisa polypeptide and polypuncleotide are also useful in diagnostic assays, as well as in identifying compounds (e.g. agonists or antagonists) that are potentially useful in therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The present invention describes antigenic peptides (I) comprising: (a) cany one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino CC acids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample: CC and (2) an isolated antibody having high specificity and high affinity or CC avidity for a particular GPCR. (I) can be used as GPCR modulators and in CC gene therapy. The antigenic peptides for GPCRs are useful in detecting an CC antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for detecting the CC gresence or absence of corresponding GPCRs. The antigenic peptides for CC GPCRs and antibodies are useful for diagnosing and designing drugs for CC treating immune-related diseases, growth-related diseases, cell CC diseases, or autoimmune diseases, growth-related diseases, cell cost costion, altergise, Crohn's disease, Alzheimer's disease, datheroscierosis, bacterial, fungal, protozoan or viral infections, CC osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, altergise, Crohn's disease, diabetes, graft versus host CC disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, cancer, cardiomyopathy, chronic and acute of the present of the present involved. The antibodies may be CC used in immunoassays and immunodiagnosis. ABZ45231 to ABZ4269 encode CC GPCR proteins given in ABP81675 to ABP82018, which are used in the

CC which alters G protein coupled receptor (GPCR) internalisation. The CC method comprises providing a cell comprising a GPCR, an arrestin, and a CC modified G protein coupled receptor kinase (GRK), exposing the cell to CC arrestin, or modified GRK, and monitoring a difference between the CC distribution of the GPCR, arrestin, or modified GRK in the GPCR, arrestin, or modified GRK in the cell in the CC distribution of the GPCR, arrestin, or modified GRK in the cell in the CC presence and absence of the compound. The GPCR in the method described CC above is at least partially internalised in an agonist-independent manner CC distribution of the GRK. (I) has cardiant, cardiovascular, CC antiasthmatic, respiratory, antiinflammatory, antiallergic, anorectic, antiparkinsonian, nootropic, antidepressant, CC analgesic, anorectic, antiparkinsonian, nootropic, neuroprotective, CC analgesic, anorectic, antiparkinsonian, nootropic, neuroprotective, CC immunosuppressive and cytostatic activities, and can be used as a GC protein antagonist. The methods and compositions of the present invention CC desensitisation, such as angina pectoris, essential hypertension, CC myocardial infarction, arrhythmias, congestive heart failure, CC atherosclerosis, renal failure, diabetes, asthma, chronic bronchitis, constric ulcers, pain, obesity, depression, obsessive-compulsive disease, failure, disease, multiple sclerosis and cancer. The present sequence is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina WPI; 2004-390329/36. N-PSDB; ADO29792.

Claim 1; SEQ ID NO 243; 542pp; English. pectoris,

Parkinson's disease.

CY
CRORRED and nucleic acids encoding them. The invention also relates to compensation relates to human and mouse G protein-coupled receptors CC (GPCRE) and nucleic acids encoding them. The invention also relates to compensate the control of treatment of GPCR proteins and nucleic acids control of the invention; methods of screening for compounds useful in the treatment of GPCR-related diseases; a transgenic compounds useful in the treatment of GPCR-related diseases; a transgenic computation in a GPCR transgene or in an endogenous GPCR gene; cells derived from the transgenic mice; kits comprising several mice, each of which has comparison in a different GPCR gene of the invention; and kits comprising comprising the comprision of a mutation in a different GPCR gene of the invention; and kits comprising comprising the comprising comprising a gPCR gene of the invention; and kits comprising comprising a gPCR mucleic acid. The GPCR polymclectides of the invention. The comprising a gPCR mucleic acid. The GPCR polypeptides and vectors comprising a gPCR mucleic acid. The GPCR polypeptides and vectors comprising a gPCR mucleic acid. The GPCR polypeptides and vectors comprising a gPCR mucleic acid. The GPCR polypeptides and vectors comprising a gPCR mucleic acid. The GPCR mucleic acids and proteins may comprise the disposis, treatment or prevention of a wide variety of comprising a gPCR mucleic acid. The GPCR mucleic acids and proteins may compression, diabetic neuropathy, parkinson's disease or schizophrenia); conditions disease, disarrhoes, food poisoning or irritable bowel composition or intestine compression or interestine control of the colon or intestine control of the colon or intes anaemia or leukaemia); immune disorders (e.g., autoimmune disorders or AIDS); bone and joint disorders (e.g., osteoarthritis, rheumatoid arthritis, gout or osteoporosis); metabolic or nutritive disorders (e.g. obesity, enzyme deficiency-related diseases or vitamin deficiency-related deficiency-related disorders (e.g

Cwith G protein coupled receptor SREB3 polypeptide. The method is useful

CC for screening, diagnosing or treating cardiovascular disease, cancer,

CC endocrinological disease, metabolic disease, hematological disease,

CC respiratory disease, neurological disease, urological disease or

CC reproduction disease in mammals. Also useful for treating hypertension,

CC ulcer, myocardial infarction, asthma, allergise, depression,

CC schizophrenia, dyskinesia, delirium and dementia. The method provides the

CC screening of an agent for the treatment of a wide variety of disease,

CC including cardiovascular disease, cancer, endocrinological disease,

CC metabolic disease, hematological disease, respiratory disease,

CC meurological disease, urological disease or reproduction disease, by

CC detecting the binding and/or activity with a G protein coupled receptor,

CC SREB3 that is highly expressed in various brain tissues. The present

                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to novel genes (AAI99548-AAI99604) and proteins (C (AAM99936, AAM99984) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are c isolated from a range of human tissues disclosed in the specification. C The nucleic acids, proteins, antibodies and (ant)agonists are useful in the disgnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, c breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune C disorders e.g. Addison's disease, allergies, autoimmune haemolytic c anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, c multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) c ardiovascular disorders such as myocardial ischaemias; (d) wound healing (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) c infectious diseases such as viral, bacterial, fungal and parasitic c infectious diseases such as viral, bacterial, fungal and parasitic c infectious diseases such as viral, bacterial, fungal and parasitic c infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly c from WIPO at ftp.wipo.int/pub/published_pct_sequences
